

## Company

**p+p project engineering+management ag** is an independent engineering company specialised in the pulp and paper industry. We also have broad in-house expertise in the food and beverage industries.

Although our company is young – formed in 2004 – the founders and partners have a wealth of knowledge accumulated in over 20 years of experience in the pulp and paper industry.

By the way, **p+p** stands for **pulp+paper**. That's our industry and our key competence.

Where do you need us? We can deliver our services in our offices, at your office, or on the job site, as you need.

We have a network of experienced specialists at our disposal. They augment our core team as each project requires.

**The knowledge and experience of our team will move you and your project further ahead.**

## Core team and founding partners

**Hans-Peter Lutz**
